# WHY BASE?

Base is a secure, low-cost, builder-friendly Ethereum L2 built to bring the next billion users onchain. It is built on the OP Stack so that it can remain decentralized, permissionless, and open to anyone.

- Base is built to be the onchain home for Coinbase products, users, and assets, as well as an open ecosystem where anyone can build for them. Leverage Coinbase's developer tools to make building easy and reach Coinbase users.
- Base is powered by Optimism's OP Stack, making it one of the most secure, scalable EVM L2s out there. The OP Stack is an open-source public good that will serve as the foundation for a "superchain" of L2s that share interoperability, sequencing, and governance.
- Smaller Fees
